#### VEHICLE HIGHLIGHTS

- Bolt EV's drive system uses a single, high-capacity electric motor for propulsion
- The motor is capable of producing up to 266 lb.-ft. (360 Nm) of torque and 200 hp (150 kW) of motoring power. Combined with a 7.05:1 final drive ratio, that helps propel the Bolt EV from 0-60 mph in less than seven seconds
- Power delivery is controlled by Chevrolet's first Electronic Precision Shift system – a shift and park-by-wire system that sends electronic signals to the Bolt EV's drive.
- A by-wire shifter requires less packaging space than a traditional mechanical shifter, resulting in more interior space and improved interior layout.
- 60 kWh lithium ion battery pack, featuring five sections, 10 modules and 96 cell groups (three cells per group)
- Flat battery pack spans the entire length of the vehicle's floor
- A 7.2 kW onboard charger for regular overnight charging from a 240-V wall box is standard. With it, a typical commute of 50 miles can be recharged in less than two hours.
- An available DC Fast Charging system using the industry standard SAE Combo connector, enabling the battery to be charged up to 90 miles of range in 30 minutes (outside temperatures may affect charging time)
- Regenerative braking feature has the ability to provide one-pedal driving
- Large 10.2-inch-diagonal color touch-screen display with "flip-board" operation
- Rear camera mirror and Surround Vision
- Large greenhouse provides panoramic visibility, with upright SUV-like seating
- LED headlamps and taillamps
